

# IMPORTANT INFORMATION

## About Your Spectrum Sample Set

### What's Included (and What's Missing)

Your Spectrum Sample Set includes every color and color-mix we make, as well as *examples* of every texture. Where a glass color is available in more than one texture, usually only one is included. For example, your box may include a sample of #132 (Light Blue) in the Waterglass® texture. This color is also available in the Smooth (s), "Rough Rolled" (RR), and Artique® (A) textures. We've provided a quick-reference chart in the sample box lid (and on the back of this sheet), to make texture selection easy.

### Iridescent Glass

The surface of Iridescent glass has been coated with a thin layer of metallic crystal during manufacture, creating a colorful, radiant effect. Your Sample Set includes a few examples of Iridescent Glass, and many more are available. Refer to the back of this sheet for a complete listing of our iridescent glass.

### Keeping Your Sample Set Up-to-Date

Your Sample Set comes with a Registration Card which you must return to Spectrum by mail, FAX or otherwise. We will contact you by mail, usually once per year, when new samples are available to add to your set. UpDates are also announced on our website.

If you wish to order individual samples outside of the annual UpDate process, contact us by phone, FAX or e-mail for current pricing.

### A Note on the Accuracy of Samples

We make every effort to grade each sample so that it is reasonably representative of a product's color, mix characteristics and light transmission. However, in some glass types, it is impossible to fairly represent the appearance of a large piece in a small sample. Please use the enclosed Spectrum Product Catalog in conjunction with your Sample Set to better judge how a product might look in larger pieces.
